

CASE STUDY

REGIONAL FOOD TREATMENT. NATIONAL ENERGY SOLUTION

Business Challenge

Sustaining an increasingly regulated business model
Securing long term value through handled resources
To become a low-cost operator

Service

Sustainable consultancy
On-site waste management
Equipment sourcing and supply
Turnkey WTE project management

Savings & Benefits

Savings: Yr 1: £25,000
Long term Benefits: £00'000s pa

Additional Benefits:

Future proof operation
Market USP
Lean operation
Production efficiency
Clean energy generation
Enhances margins
Brand Development

REGIONAL ANIMAL FEED PRODUCER

An established operator collecting over 40,000 tonnes of useable food by-products per annum to formulate organics into wet and dry mix animal feed suitable for FEMAS accredited customers and suppliers within UK and European markets. For many years, our client has successfully closed the loop within a progressive agricultural feed chain as it looks to expand its operation.

THE CHALLENGE

As legislation demands greater control and quality of finished product the incidence of non-reusable by-products increases as sustainable methods of treatment and disposal such as land spreading decreases. As conventional agricultural practice comes increasingly under scrutiny a flexible business model was necessary to sustain a commercially viable and compliant operation.

THE SOLUTION

Packaged Group as strategic consultant has implemented several short and long term initiatives to future proof this operation. These include, on site waste management delivering process change to reduce op costs through the sourcing and supply of packaging equipment, reducing contamination of re-usables at source, to enhance rebates of dry mixed recycling and improve price point of animal feed products. Packaged Group have also been commissioned to propose a full waste to energy turnkey solution to deliver latest on-site energy conversion technology within 24/36 months. This will safeguard enhanced values of collected foodstuffs for the foreseeable future.
